

Tools & Aversives Policy

This Policy aims to outlay our stance as an organisation as to what tools are permitted for use on assistance dogs whilst training and working within Canine Allies CIC

Our Ethos

Canine Allies CIC adheres to training that is least aversive and minimally intrusive, we do not endorse nor condone the utilisation of punishment as a way of training. Canine Allies CIC recognises that any tool, when misapplied, can become aversive, we strongly recommend that individuals pursue comprehensive training for both the dog and handler prior to the introduction of any training aids.

Acceptable tools

We will work with teams on the following equipment:

- Flat collar
- Harnesses
- Slip leads
- Appropriately fitted martingale collars
- Figure 8 head collars
- Other head collars (dogmatic, halti, etc)

When these tools are used correctly and humanely, we realise they are effective training tools for assistance dogs, and their disabled handlers. As stated above please consult with a trainer within the organisation if you are unsure of the tools or how to use them.

Unacceptable tools

We do not permit the use of the following equipment:

- E-collars/shock collars
- Prong collars
- Chain pinch collars
- Any other equipment designed to cause significant discomfort to the dog. Our trainers will be able to assess if a tool is being used in the correct manner, and whether this will fall into our aversives list.

If an assistance dog team would like to join/joined Canine Allies CIC previously using these methods, our trainers are well equipped to assist the team move to more appropriate methods.
